

North Platte National Wildlife Refuge  
Scottsbluff, Nebraska

North Platte National Wildlife Refuge, containing 5047 acres, lies in the Panhandle of western Nebraska. Established in 1916, the refuge is superimposed over four Water and Power Resources Service irrigation reservoirs (Lake Minatare, Lake Winters Creek, Little Lake Alice, Lake Alice) north of Minatare, Nebraska. The reservoirs are managed by the Pathfinder Irrigation District and public use around Lake Minatare is administered by the Nebraska Game and Parks Commission through the Lake Minatare State Recreation area. The entire refuge area (with the exception of some recreation cabin areas) is closed to the public from October 1 through January 15 to provide sanctuary for up to 200,000 mallards and other waterfowl during the waterfowl hunting season.

Refuge headquarters are at the Crescent Lake National Wildlife Refuge 28 miles north of Oshkosh, Nebraska. A seasonal employee frequents the refuge area between mid-September and late January. Although public use is often intense between mid-January and late September, numerous species of waterfowl, shorebirds, and song birds find the refuge attractive during the spring and fall migration periods. Wintering populations vary widely depending on ice conditions on the lakes.

In the following preliminary list of 181 species of birds observed on the refuge from fall 1975 through winter 1980-81, those marked with an asterisk (\*) nest on the refuge. Those marked with a caret (^) are suspected to nest at least occasionally, but further confirmation is needed.

Habitat preference, seasonal occurrence and abundance have been coded as follows:

W - Wetlands	Sp - March-May (3-5)
G - Grasslands	S - June-August (6-8)
B - Brushlands	F - September-November (9-11)
T - Trees	W - December-February (12-2)
H - Buildings	

a - abundant: common species, very numerous  
c - common: certain to be seen in suitable habitat  
u - uncommon: present, but not certain to be seen  
r - rare: seen only a few times during a season  
o - occasional: seen at intervals of 2 to 5 years  
x - accidental: has been seen once or more since refuge establishment

Numerals (1 through 12) indicate known months of occurrence. Slashes separate seasons. The years of occurrence (one or two) for accidental species are shown in parentheses.
